

Elias Leslie — Security Automation Summary

Last updated: 2026-06-07

Positioning

Elias Leslie builds AI-assisted security automation and infrastructure tooling with emphasis on secure defaults, repeatable installs, auditable checks, and practical operator workflows.

Public proof points

Aico: Public Linux desktop companion for terminal AI agents. Release work included secret/history scanning, standalone docs, Apache-2.0 licensing, CI, local runtime smoke checks, and clean Proxmox install verification. Repository: <https://github.com/elias-leslie/aico>

Security Hardening Automation: Public hardening automation platform for Windows and Linux endpoints with a FastAPI control plane and Next.js operator dashboard. Repository: <https://github.com/elias-leslie/sha>

Agent Hub: Public self-hosted control plane for multi-provider AI agents, sessions, credentials, prompts, and automation telemetry. Repository: <https://github.com/elias-leslie/agent-hub>

A-Term: Public browser workspace for AI coding agents, shells, files, and notes. Repository: <https://github.com/elias-leslie/a-term>

Portfolio AI: Public full-stack investment intelligence workspace. Portfolio materials do not show real balances, holdings, transactions, account IDs, or brokerage data. Repository: <https://github.com/elias-leslie/portfolio-ai>

Skills demonstrated

- Security automation design: hardening, evidence, rollout and rollback thinking.
- Agentic AI tooling: terminal agents, browser context capture, prompt/session infrastructure.
- Full-stack systems: FastAPI, Next.js/Electron, PostgreSQL/Redis-style service design, Linux runtime integration.
- Public release discipline: license, docs, config examples, secret scanning, CI, smoke testing, clean install verification.
